

5 Tips to
**Improve Your
Sustainability
Reporting**

An aerial photograph of a streambed. The water is clear and shallow, revealing a bed of grey and white rocks of various sizes. The banks are covered in lush green moss and small plants. The overall scene is natural and serene.

1.

**Automate data
capture with
APIs and IoT device**

**Save time and resources on your
sustainability reporting by utilizing a
software solution that automates data
management and collection**

2.

Simplify Scope 2 reporting with utility bill management.

Eliminate the need to manually collect utility information for reporting with a platform that integrates this information automatically.

3.

Simplify Scope 3 reporting with built-in survey functionality.

Create forms and surveys to streamline the multi-user experience and supplier data entry for Scope 3 reporting.

4.

Improve data quality with automated gap and outlier detection.

Increase accuracy and confidence in your data by utilizing a system that automatically detects errors, gaps, and outliers.

5.

Save time with built-in workflows, data calculation, and emission factor libraries.

Decrease the amount of time you spent on putting together a sustainability report by employing a software solution that makes every step easier.
